

Sprint Planning Notes

Team: Group 3 (TUES1830-Reza)

Sprint: Sprint 3

Date: 18/09/2021

Attended:

Scrum Master: Rashed Abdin

Product Owner: David Aziz

Development team: Kowsar Rahman and Dunith Nadvi Karawita

1. Goal

The aim for this sprint is to implement PayPal into the development of the code. We plan to have PayPal implemented to a point where users can edit their PayPal information and be able to place orders using PayPal. We also plan to have admins and shop owners being able to edit the books published. We aim to have the user interface being completely functional with the backend and be able to perform purchases and view order history placed.

2. Duration of the sprint

2 weeks

3. What is the team's vision for this sprint?

The items of the product backlog which the customer can place an order for a book using PayPal as a payment method, can edit PayPal information, can view order status and can cancel order with 2 hours. This is because we have the functionality of adding/removing books and customers can search for the book they want. Now the most suitable next step for BOOKERO to be ready for deployment would be that the customers can be able to place an order for a book. This is also because the priority levels of these tasks are deemed.

What will be ready by the end of the sprint is that users can have an interface that will allow them to add a book to a cart and allow for them to be able to purchase a book via PayPal and cancel an order if deemed necessary.

4. Estimation in story points

Check Jira for story points of each item. But for example, as for a particular item: Customers can place an order for a book using PayPal as a payment method. The story points for this is set as 8, this is because the effort to be able to place an order via PayPal is going require a lot of effort in our team to complete this.
