

Sprint Planning Notes

Team: Group 3 (TUES1830-Reza)

Sprint: Sprint 1

Date: 13/08/2021

Attended:

Scrum Master: Rashed Abdin

Product Owner: David Aziz

Development team: Kowsar Rahman, Oliver Lukis and Dunith Nadvi Karawita

1. Goal

The aim for this sprint is to implement the wireframes into the development of code. We aim to have a user interface that will display the homepage, login page and user can register for an account. We also aim to progressively continue to keep updating our user stories and continue to keep testing main functions.

2. Duration of the sprint

2 weeks

3. What is the team's vision for this sprint?

The login and registration items from the product backlog of each type of user (e.g. customer or admin) will be committed the sprint backlog and will be assigned as tasks for developers to take. This is because these tasks will be key function in making sure we can progress to more enhanced part of this project.

What will be ready by the end of this sprint is that users can have an interface to interact with and be able to login and register an account with which will allow them to use the BOOKERO page as they please. At the end of this sprint, they will only be able to login and register their account and what type of user they wish to be.

4. Estimation in story points

Check Jira for the story points of each item. But for an example as for a particular item: As an admin I need to be able to log into BOOKEROO, so that I can access the admin panel. Story points for this task is set as 5, this is because the effort to create a login page and accessing the admin panel is not seen as that much effort in our team and can be completed with little effort.
