

Sprint Planning Notes

Team: Group 3 (Tue1830-Reza)

Sprint: Sprint 0

Date: 27/07/2021

Attended:

Scrum Master: Rashed Abdin

Product Owner: David Aziz

Development team: Kowsar Rahman, Oliver Lukis and Dunith Nadvi Karawita

1. Goal

The goal we are trying to achieve in this sprint is to get the product backlog updated to a standard that can allow for implementation of the project for the next sprint. We as a group need to make sure we properly plan for sprint 1 by creating a product backlog and designing user stories that will be an important element to our design. We are also aiming to create wireframes based on our backlog stories and test them before we start the implementation in the next sprint.

2. Duration of the sprint

1 week

3. What is the team's vision for this sprint?

The items that will be committed to the sprint backlog will be based on the designing and implementation of the user stories. We will create tasks based on the key features of the product backlog that will be done by designing wireframes based on the product backlog then testing that item using acceptance testing.

The product will have a design that is ready for implementation. The design will have clear wireframes that were designed from the product backlog and tested to ensure they are potentially ready to be implemented. Currently we are still at the designing phase of the project so no features will be currently working, but you can have a rough idea of where we are starting and aim towards for the implementation.

4. Estimation in story points

Check Jira for the story points for each item
