

Sprint Planning Notes

Team: Group 3 (TUES1830-Reza)

Sprint: Sprint 4

Date: 11/10/2021

Attended:

Scrum Master: Rashed Abdin

Product Owner: David Aziz

Development team: Kowsar Rahman and Dunith Nadvi Karawita

1. Goal

The aim for this sprint is to complete all remaining user stories, enhance/refactor the code to improve our BOOKERO app and writing a report to indicate how our app runs as well an overview of how we managed as a scrum team. We also plan to deploy our app to the server and rerun all test cases to ensure our app is running as expected with no errors.

2. Duration of the sprint

2 weeks

3. What is the team's vision for this sprint?

The items of the product backlog which will be committed to the sprint backlog will be all the remaining user stories left in the product backlog. This is because there are 5 remaining user stories which we have left to implement. On top of the 5 remaining user stories left to implement, we also plan to refactor/update implemented user stories for an enhanced version of the app to make it perform/appear better.

At the end of this sprint our app will be completed with all user stories implemented and refactored/enhanced for an overall good looking, easy app to use. Now our BOOKERO app will have required features working such as a login/register page with different user types login into a different interface, customers being able to purchase a book through PayPal APIs and able to cancel their order within 2 orders, admin being able to approve/deny users, edit book information and shop owners being able to publish their books and being able to mark if it's currently out of stock. All these features plus more will be outlined in the report to great detail but essentially by the end of this sprint our BOOKERO app will be able to perform many features that we have implemented throughout all our sprints.

4. Estimation in story points

Check Jira for story points of each item. But for example, as for a particular item: Customer can request for a refund on a book they ordered. The story points for this is set as 8, this is because the effort to be able to request a refund specially in a timeframe within 2 hours is going to require a lot of effort from our team to implement this without error.
